Warren County Schools

Math I Curriculum Map

Foundations of Math I

<p>Solving equations fluently. Graphing linear equations and inequalities Graph inequalities; do not write inequalities at the Foundations level Include prerequisite skill work: Slope/rate of change given equations, points, point/slope, graph. Graphing linear equations and inequalities</p>	<p>The work of this unit should focus primarily on linear functions Students should be able to recognize whether a function is linear or non-linear from all applicable representations. Identify functions from ordered pairs, mappings, graphs. Discuss domain and range Vocabulary: independent, dependent, input, output, relation, function, function notation.</p>	<p>Limit to solving systems by graphing, substitution, and elimination *No Application expected at this level.</p>	<p>Identify Exponential functions Graphing Exponential Functions Arithmetic and geometric sequences Determine whether the function is growth or decay from equation, and graph. Understanding a and b in $g(x) = ab^x$ *No Application expected at this level.</p>	<p>The work of this unit should include the following work with: Laws of exponents with integers Polynomials Addition and subtraction Multiplication Factoring basic trinomials Solve Quadratics using factoring *No Application expected at this level.</p>	<p>The work of this unit should include summarization, representation and analysis of univariate data. Students should be able to compare data sets and describe the most appropriate measures to describe the data. Students should extend their work with bivariate data to scatter plots and linear models</p>

High School Math Standard Course of Study for North Carolina Math 1

THE REAL NUMBER SYSTEM N-RN

Extend the properties of exponents to rational exponents.

NC.M1.N-RN.2 Rewrite algebraic expressions with integer exponents using the property of exponents.

SEEING STRUCTURE IN EXPRESSIONS A-SSE

Interpret the structure of expressions.

NC.M1.A-SSE.1 Interpret expressions that represent a quantity in terms of its context.

- a. Identify and interpret parts of a linear, exponential, or quadratic expression including terms, factors, coefficients, and exponents
- b. Interpret a linear, exponential, or quadratic expression made of multiple part as a combination of entities to give meaning to an expression.

NC.M1.A-SSE.3 Write an equivalent form of a quadratic expression, $ax^2 + bx + c$, where a is an integer, by factoring to reveal the solutions of the equation or the zeros of the function the expression defines.

ARITHMETIC WITH POLYNOMIALS & RATIONAL EXPRESSIONS A-APR

Perform arithmetic operations on polynomials.

NC.M1.A-APR.1 Build an understanding that operations with polynomials are comparable to operations with integers by adding and subtracting quadratic expressions and by adding, subtracting, and multiplying linear expressions.

NC.M1.A-APR.3 Understand the relationships among the factors of a quadratic expression, the solutions of a quadratic equation, and the zeros of a quadratic function.

Warren County Schools

Math I Curriculum Map

CREATING EQUATIONS A-CED

Create equations that describe numbers or relationships.

- NC.M1.A-CED.1 Create equations and inequalities in one variable that represent linear, exponential, and quadratic relationships and use them to solve problems.
- NC.M1.A-CED.2 Create and graph equations in two variables to represent linear, exponential, and quadratic relationships between quantities.
- NC.M1.A-CED.3 Create systems of linear equations and inequalities to model situations in context.
- NC.M1.A-CED.4 Solve for a quantity of interest in formulas used in science and mathematics using the same reasoning as in solving equations.

REASONING WITH EQUATIONS & INEQUALITIES A-REI

Understand solving equations as a process of reasoning and explain the reasoning.

- NC.M1.A-REI.1 Justify a chosen solution method and each step of the solving process for linear and quadratic equations using the mathematical reasoning.
- NC.M1.A-REI.3 Solve linear equations and inequalities in one variable.
- NC.M1.A-REI.4 Solve for real solutions of quadratic equations in one variable by taking square roots and factoring.

Solve systems of equations.

- NC.M1.A-REI.5 Explain why replacing one equation in a system of linear equations by the sum of that equation and a multiple of the other produces a system with the same solutions.
- NC.M1.A-REI.6 Use tables, graphs, or algebraic methods (substitution and elimination) to find approximate or exact solutions to systems of linear equations and interpret solutions in terms of a context.

Represent and solve equations and inequalities graphically.

- NC.M1.A-REI.10 Understand that the graph of a two variable equation represents the set of all solutions to the equation.
- NC.M1.A-REI.11 Build an understanding of why the x -coordinates of the points where the graphs of two linear, exponential, and/or quadratic equations $y=f(x)$ and $y=g(x)$ intersect are the solutions of the equation $f(x)=g(x)$ and approximate solutions using graphing technology or successive approximations with a table of values.
- NC.M1.A-REI.12 Represent the solutions of a linear inequality or a system of linear inequalities graphically as a region of the plane.

INTERPRETING FUNCTIONS F-IF

Understand the concept of a function and use function notation.

- NC.M1.F-IF.1 Build an understanding that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range by recognizing that:
 - If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x .
 - The graph of f is the graph of the equation $y = f(x)$.

NC.M1.F-IF.2 Use function notation to evaluate linear, quadratic, and exponential functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

NC.M1.F-IF.3 Recognize that recursively and explicitly defined sequences are functions whose domains is a subset of the integers, the terms of an arithmetic sequence are a subset of the range of a linear function, and the terms of a geometric sequence are a subset of the range of an exponential function.

Interpret functions that arise in applications in terms of the context.

- NC.M1.F-IF.4 Interpret key features of graphs, tables, and verbal descriptions in context to describe functions that arise in applications relating two quantities, including: intercepts; intervals where the function is increasing, decreasing, positive, or negative; and maximums and minimums.
- NC.M1.F-IF.5 Interpret a function in terms of the context by relating its domain and range to its graph and, where applicable, to the quantitative relationship it describes.
- NC.M1.F-IF.6 Calculate and interpret the average rate of change over a specified interval for a function presented numerically, graphically, and/or

Warren County Schools
Math I Curriculum Map

symbolically.

Warren County Schools

Math I Curriculum Map

NC.M1.F-IF.7 Analyze linear, exponential, and quadratic functions by generating different representations, by hand in simple cases and using technology for more complicated cases, to show key features, including: domain and range; rate of change; intercepts; intervals where the function is increasing, decreasing, positive, or negative; maximums and minimums; and end behavior.

NC.M1.F-IF.8 Use equivalent expressions to reveal and explain different properties of a function

- Rewrite a quadratic function to reveal and explain different key features of the function
- Interpret and explain growth and decay rates for an exponential function.

NC.M1.F-IF.9 Compare key features of two functions (linear, quadratic, or exponential) each with a different representation (symbolically, graphically, numerically in tables, or by verbal descriptions).

BUILDING FUNCTIONS F-BF

Build a function that models a relationship between two quantities.

NC.M1.F-BF.1 Write a function that describes a relationship between two quantities.

- Build linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two ordered pairs (including reading these from a table).
- Build a function that models a relationship between two quantities by combining linear, exponential, or quadratic functions with addition and subtraction or two linear functions with multiplication.

NC.M1.F-BF.2 Translate between explicit and recursive forms of arithmetic and geometric sequences and use both to model situations.

LINEAR, QUADRATIC, & EXPONENTIAL MODELS F-LE

Construct and compare linear, quadratic, and exponential models and solve problems.

NC.M1.F-LE.1 Identify situations that can modeled with linear and exponential functions, and justify the most appropriate model for a situation based on the rate of change over equal intervals.

NC.M1.F-LE.3 Compare the end behavior of linear, exponential, and quadratic functions using graphs and tables to show that a quantity increasing exponentially eventually exceeds a quantity increasing linearly or quadratically.

NC.M1.F-LE.5 Interpret the parameters a and b in a linear function $f(x)=ax+b$ or an exponential function $g(x) = ab^x$ in terms of context.

EXPRESSING GEOMETRIC PROPERTIES WITH EQUATIONS G-GPE

Use coordinates to prove simple geometric theorems algebraically.

NC.M1.G-GPE.4 Use coordinates to solve geometric problems involving polygons algebraically.

- Use coordinates to compute perimeters of polygons and areas of triangles and rectangles.
- Use coordinates to verify algebraically that a given set of points produces a particular type of triangle or quadrilateral.

NC.M1.G-GPE.5 Use coordinates to prove the slope criteria for parallel and perpendicular lines and use them to solve problems.

- Determine if two lines are parallel, perpendicular, or neither.
- Find the equation of a line parallel or perpendicular to a given line that passes through a given point.

NC.M1.G-GPE.6 Use coordinates to find the midpoint or endpoint of a line segment.

Warren County Schools

Math I Curriculum Map

INTERPRETING CATEGORICAL & QUANTITATIVE DATA S-ID

Summarize, represent, and interpret data on a single count or measurement variable.

NC.M1.S-ID.1 Use technology to represent data with plots on the real number line (histograms, and box plots).

NC.M1.S-ID.2 Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets. Interpret differences in shape, center, and spread in the context of the data sets.

NC.M1.S-ID.3 Examine the effects of extreme data points (outliers) on shape, center, and/or spread.

NC.M1.S-ID.6 Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.

- a. Fit a least squares regression line to linear data using technology. Use the fitted function to solve problems.
- b. Assess the fit of a linear function by analyzing residuals.
- c. Fit a function to exponential data using technology. Use the fitted function to solve problems.

Interpret linear models.

NC.M1.S-ID.7 Interpret in context the rate of change and the intercept of a linear model. Use the linear model to interpolate and extrapolate predicted values. Assess the validity of a predicted value.

NC.M1.S-ID.8 Analyze patterns and describe relationships between two variables in context. Using technology, determine the correlation coefficient of bivariate data and interpret it as a measure of strength and direction of a linear relationship. Use a scatter plot, correlation coefficient, and a residual plot to determine the appropriateness of using a linear function to model a relationship between two variables.

NC.M1.S-ID.9 Distinguish between association and causation.

Conceptual Category	NC Math 1 EOC

EOC Testing Structure and Time

- The EOC Assessment of NC Math 1 contains 60 items. Included in the total item counts are embedded field test items that will not be included in the score but will be used for purposes of developing items for future test forms.

NC Math 1 2016-17	Number of Multiple Choice Items	Number of Gridded Response Items
Operational	40	10
Field Test*	8	2
Total	48	12

*Field test items will not be included in the score but will be used for purposes of developing items for future test forms.

- The NCDPI estimates it will take 180 minutes for nearly all students to complete the assessment. The NCDPI requires all students be allowed ample opportunity to complete the assessment. The maximum amount of time allowed is 240 minutes except for students with documented special needs requiring accommodations, such as *Scheduled Extended Time*. Refer to the [North Carolina Test Coordinators' Policies and Procedures Handbook](#) for additional information.
