Philosophical approach to the process of teaching and learning science in the Warren County School District (WCS).

In WCS there is an emphasis on both traditional and innovative teaching mythologies of science curriculum. Whereas traditional laboratory experiences provide opportunities to demonstrate how science is constant, historic, probabilistic, and replicable; intuitive-practical solutions to scientific problem solving are encouraged. Even though there are no fixed steps that all scientists follow, scientific investigations usually involve collections of relevant evidence, the use of logical reasoning, the application of imagination to devise hypotheses, and explanations to make sense of collected evidence. Student engagement in scientific investigation provides background for understanding the nature of scientific inquiry. In addition, the science process skills necessary for inquiry are acquired through active experience. The process skills support development of reasoning and problem-solving ability and are the core of scientific methodologies.
### UNIT 1 Motion, Speed, and Velocity

<table>
<thead>
<tr>
<th>Suggested Time Frame (Weeks)</th>
<th>Topic/Standard</th>
<th>Essential Questions/Learning Intentions</th>
<th>Key Vocabulary</th>
<th>Unit Assessments and NCFE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>UNIT 1 Motion, Speed, and Velocity</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| **Weeks (1-2)** | PSc.1.1.1 Explain motion in terms of frame of reference, distance and displacement. | - Describe velocity as a relationship between displacement and time.  
- Understand that all motion is relative (requires a frame of reference).  
- Describe motion as a change in position.  
- Utilize graphs to determine speed and velocity. | Motion  
Average Speed  
Velocity  
Frame of Reference  
Distance  
Displacement  
Uniform Motion  
Slope | TBD by Site Administration |
| PSc.1.1.2 Compare speed, velocity, acceleration, and momentum using investigations, graphing, scalar quantities and vector quantities. | | | | |

### UNIT 2: Acceleration and Forces

<table>
<thead>
<tr>
<th>Suggested Time Frame (Weeks)</th>

<tbody>
<tr>
<td><strong>UNIT 2: Acceleration and Forces</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| **Weeks (3-4)** | PSc.1.2.1 Explain how gravitational force affects the weight of an object and the velocity of an object in free fall. | - Describe acceleration as a relationship between velocity and time.  
- Analyze graphical data to determine velocity and acceleration.  
- Investigate the acceleration due to gravity as an example of uniformly changing velocity (where \( g = 9.8 \text{ m/s}^2 \)).  
- Distinguish between the mass and weight of an object with weight as the relationship between the acceleration due to gravity. | Acceleration  
Inertia  
Force  
Net Force  
Balanced Forces  
Newton’s First Law of Motion  
Newton’s Second Law of Motion  
Newton’s Third Law of Motion  
Action-Reaction Pairs  
Mass  
Weight  
Friction  
Gravity  
\( F = ma \) | TBD by Site Administration |
and the mass of the object.

- Investigate friction as a force that opposes the motion of an object.
- Analyze the motion of an object in free fall.

**UNIT 3: Energy and Work**

<table>
<thead>
<tr>
<th>Weeks (5-6)</th>
<th>PSc.3.1.1</th>
<th>Understand types of Energy, conservation of Energy, and Energy Transfer.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>PSc.3.1.2</td>
<td>Explain the Law of Conservation of Energy in a mechanical system in terms of Kinetic energy, Potential energy, and Heat.</td>
</tr>
<tr>
<td></td>
<td>PSc.3.1.3</td>
<td>Explain Work in terms of the relationship among the force applied to an object, the resulting displacement of an object, and the energy transferred to an object.</td>
</tr>
<tr>
<td></td>
<td>PSc.3.1.4</td>
<td>Explain the relationship among work, power, and simple machines both qualitatively and quantitatively.</td>
</tr>
</tbody>
</table>

- Analyze and investigate different forms of potential energy: elastic, gravitational, chemical, electrical, and nuclear.
- Differentiate between kinetic and potential energy.
- Calculate potential and kinetic energy mathematically.
- Calculate work as the product of force multiplied by distance.
- Investigate the scientific meaning of “work” in terms of movement and forces.
- Explain the relationship between work and power.
- Distinguish between each of the six types of simple machines.

<tr>
<td></td>
<td><strong>Switch</strong></td>
<td><strong>Voltage</strong></td>
</tr>
</tbody>
</table>

*TBD by Site Administration*
**PSc.3.3.4**
Explain magnetism in terms of domains, interactions of poles, and magnetic fields.

**PSc.3.3.5**
Explain the practical application of Magnetism.

- Describe simple series and parallel DC circuits in terms of Ohm’s Law.
- Describe how properties such as wire composition, wire length, temperature, and diameter affect the flow of electricity.
- Investigate open versus closed circuits.
- Solve simple Ohm’s Law and Power equations for DC circuits.
- Describe the behavior of magnetic domains.
- Investigate the attraction of unlike poles and the repulsion of like poles.
- Explain why a nail can be temporarily magnetized in terms of magnetic domains.

**UNIT 6: Mechanical/Electromagnetic Waves**

<table>
<thead>
<tr>
<th><strong>PSc.3.2.1</strong></th>
<th>Understand the nature of waves.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explain the relationships among wave frequency, wave period, wave velocity, amplitude, and wavelength through calculation and investigation.</td>
<td></td>
</tr>
</tbody>
</table>

- Explore the differences between mechanical and compressional waves.
- Identify the basic characteristics of a transverse wave: trough, crest, amplitude, and wavelength.
- Identify the basic

**Mechanical Wave**
- Transverse Wave
- Compressional Wave

**Electromagnetic Wave**
- Electromagnetic Wave
- Electromagnetic Spectrum
- Radiation
- Microwaves
- Infrared Waves
- Visible Light
**Week (9)**

- **PSc.3.2.3**
  Classify waves as transverse or compressional

- **PSc.3.2.4**
  Illustrate the wave interactions of reflection, refraction, diffraction, and interference.

- **Week (10)**

- **PSc.2.1.1**
  Classify matter as homogeneous or heterogeneous; pure substance or mixture; element or compound; metals, nonmetals, or metalloids; solution, colloid, or suspension.

- **PSc.2.1.2**
  Explain the phases of matter and the physical changes that matter undergoes.

- **PSc.2.1.3**
  Compare general physical and chemical properties of various types of matter.

- **Unit 7 Properties of Matter**

<table>
<thead>

  - Chemical properties
  - Physical change
  - Physical properties
  - Melting point
  - Boiling point
  - Heterogeneous
  - Homogeneous
  - Element
  - Compound
  - Mixture
  - Solution
  - Suspension
  - Colloid
  - Density
  - Conservation of Matter
# UNIT 8 : Atomic Structure and Properties

| Weeks (11-12) | PSc.2.1.4 | Interpret the data presented in the Bohr model diagrams and dot diagrams for atoms and ions of elements in groups one through eighteen.  
| | PSc.2.2.1 | Infer valence electrons, oxidation number, and reactivity of an element based on its location in the Periodic Table.  
| | **Compare/contrast the physical and chemical properties of metals, nonmetals, and metalloids.**  
| | **Describe the structure of an atom: including charge, relative mass, and the location of protons, neutrons, and electrons.**  
| | **Calculate the number of protons, electrons, and neutrons in an atom when given its atomic number and average atomic mass.**  
| | **Distinguish between period and group.**  
| | **Explain Bohr’s model, showing how electrons fill energy levels.**  
| | Periodic Table Group  
| | Period  
| | Proton  
| | Neutron  
| | Electron  
| | Metal  
| | Nonmetal  
| | Transition metal  
| | Halogen

| | Isotope  
| | Nucleus  
| | Electron Cloud  
| | Atom  
| | Average Atomic Mass  
| | Ground state  
| | Excited state  

---

# UNIT 9 Chemical Bonding

| Weeks (13-14) | PSc.2.2.2 | Infer type of chemical bond that occurs, whether covalent, ionic, or metallic, in a given substance.  
| | PSc.2.2.3 | Predict chemical formulas and names for simple compounds based on knowledge of bond formation and naming conventions.  
| | **Predict oxidation number based on the element’s location on the Periodic Table (excluding transition elements).**  
| | **Describe how ionic, covalent, and metallic bonds form and provide examples of each.**  
| | Ion  
| | Ionic Bond  
| | Cation  
| | Anion  
| | Polyatomic  
| | Ion  
| | Covalent Bond  
| | Metallic Bond  
| | Polar Bond  
| | Non-polar Bond  
| | Oxidation Number  
| | Hydrate  
| | Lewis Electron Dot
